

LAI input (top) and buffering anomaly dTmax = Tmax_sim - Tmax_macro at 1 m (7-day rolling), per scenario.
 Below grey-dotted 0 = cooler than free air (buffering). Black = observed HOBO dTmax; orange = raw S2 LAI.
 Linetype: solid = full/ATBD/ALS, dashed = d_opt/opt within each family. 4 HOBO plots binned by LAI_ALS.

Scenario family — LiDAR — Sentinel-2 — S2 rescaled->LiDAR — Fusion (ALS x S2-timing)
