

LAI input (top) and daily Tmax at 1 m per scenario, 4 HOBO plots binned by LAI_ALS (P1 open -> P4 dense).
 Black = observed HOBO; grey dotted = free-air (macro) Tmax; orange points = raw S2 LAI (DYN_S2_ATBD keying check).
 Linetype: solid = full/ATBD/ALS variant, dashed = d_opt/opt variant within each family.

Scenario family — LiDAR — Sentinel-2 — S2 rescaled->LiDAR — Fusion (ALS x S2-timing)
